

Radio Frequency Asset & People Protection

PersonalBasic

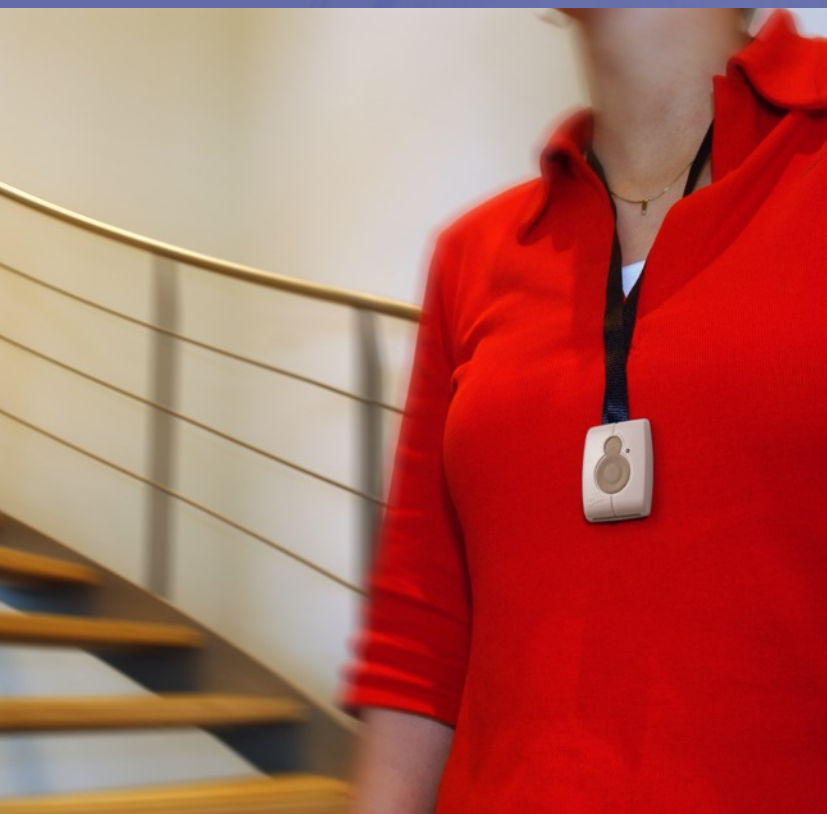

Optimum security for your employees

An employee needs help

Today, aggressive behaviour is encountered more and more frequently from customers or visitors, e.g. in hospitals, government buildings, social facilities and schools. Being confronted with aggression has large effects on the working performance of your employees. Staff feel insecure and can no longer perform their tasks in the usual way. Thus, the working environment is impaired, efficiency and productivity fall and the number of people calling in sick climbs dramatically. These are all reasons to seize new measures.

Act now !

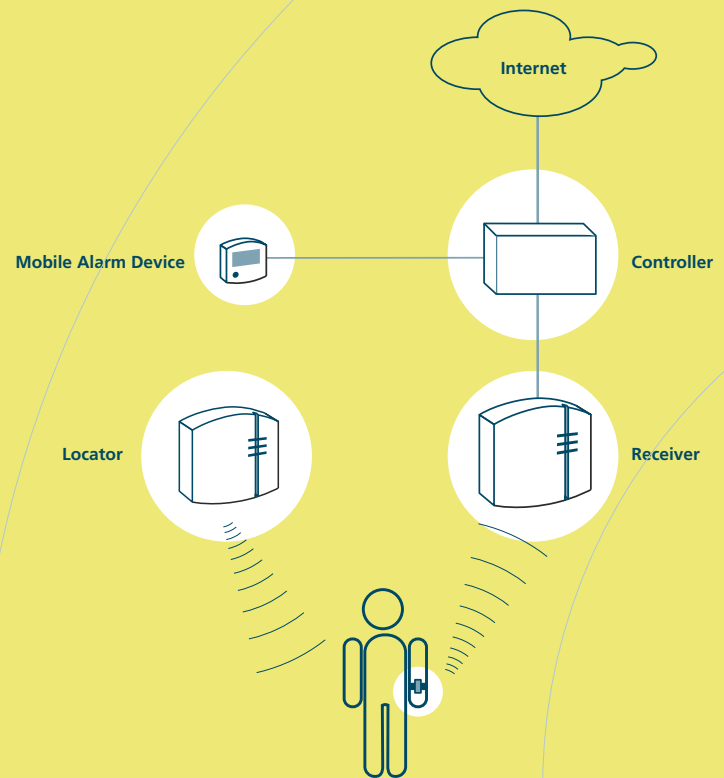

Personel protection

As a specialist in the protection of technical property and individuals, Syntron has developed this easy-to-use security system. This modern, well-engineered technology allows employees to move freely within a building during work. Using wireless technology, abuse can be immediately reported. The building, as well as all open spaces and offices remain open and easily accessible.

A small transmitter with a button

How does it work? Employees who are exposed to aggressive behaviour at their workplace wear a transmitter in the form of a watch or a clip with them for their own protection. If an employee feels threatened, it is enough to press once on the transmitter button in order to set off an alarm. The transmitter immediately sends a unique code to a receiver containing information about the precise location of the affected person. Colleagues, porters or security personnel receive the alarm immediately via their PC, telephone, mobile phone or pager and can react accordingly.

You know immediately where everyone is.

PersonalBasic provides you with important advantages. Your employees have full freedom of movement and can also feel secure at their workplaces in large crowds of people. In the case of an alarm, security personnel can immediately see who and where the affected person is. Now, within a few seconds, all necessary measures can be taken. This security provides your employees with a comfortable and productive workplace.

Effective and secure

But there is more: PersonalBasic is easy to install and can be integrated into other systems, e.g. video and access control systems. Analysis can be carried out at an "on-site workplace" or a central office. This precise detection allows your security personnel to act in a targeted fashion.

PersonalBasic provides your employees with the security they need and thus contributes to a comfortable and productive working environment.

The innovative company

Since its founding in 1997, Syntron has become known as an innovative company that uses modern technology to create effective and economical solutions for the protection of property and people.

For further information about PersonalBasic and other protection systems, please contact us directly or get in touch with one of our partners.

We are here for you.

In brief...

- *PersonalBasic is a wireless alarm reporting system*
- *Employees are protected using a mobile button*
- *A reported alarm contains precise information about the location of the affected person*
- *PersonalBasic can be easily installed in every building*
- *Freedom of movement for your employees is guaranteed*
- *Alarm tracing occurs immediately and efficiently using only a few security personnel*
- *PersonalBasic is a modular system. It can be added with the RFAPP systems LocalBasic, SeniorBasic® and JuniorBasic.®*
